Companies
of the sector*

Acquisition

We buy and collect batches of computer devices that are obsolete or out of use for your company, renewing their shelf life and recycling it responsibly.

Logistics

Certified processes that ensure efficient transport, which includes scheduling of pick-up at short notice, batch checking and reporting on completion of activities.

Reverse logistic

Sustainable solutions in Technological Waste Management, in accordance with the highest international standards and in accordance with Federal Law 12,305 (PNRS), which enables the collection and return of waste for reuse in its production cycle or other environmentally appropriate destination.

Warehouse

A high management reference, the storage complex for large batches of assets is structured with state-of-the-art technology, has two structured warehouses with approximately 6,000 m², 24-hour security system, pallets, office, docks, technical area for receipt, storage and distribution of purchased equipment batches.

On-Site Inspection

The ON-SITE Inspection starts by carrying out a physical inventory in person with a specialized technical team, in order to collect information about each piece of equipment within a batch. The service allows the customer to have a detailed list with exactness of the situation of each equipment that was inspected. All offline, to ensure optimal equipment productivity.

Decharacterization

The decharacterization and destruction of electronic assets is a service to dismantle products that are generally unfit for consumption, or obsolete, in need of an environmentally correct destination. We have a team of specialists and modern equipment that guarantee the reliability of the process and absolute confidentiality of the client's image, in addition to eliminating any external identification, stickers, logos or signs that may relate the residue to the customer.

Data Destruction

Permanent data erasure through the Data Erasure destruction process, a software method that destroys all electronic files residing on a hard drive or other digital media, rendering them unrecoverable.

Reports

Issuance of reports and certifications that guarantee the reliability of the processes regarding the contracted services;
Reports:
Technical audit report, destination and destruction report.

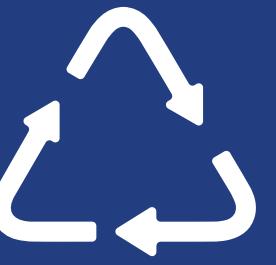

Pickup Logistics

Pioneer with the electronic asset withdrawal service throughout Brazil. With an agile team and well-aligned processes, our collections are efficient and planned, with a scheduled date and time. As a competitive differential of the brand, negotiations are efficient and bring other benefits as well.

Asset Disposal

Disposal of IT assets with certification and guarantee of confidentiality at all stages, processes certified in accordance with environmental legislation, total guarantee in the confidentiality of information.
They have been in the domestic market for over 29 years, supporting major brands in accordance with the demands of the national Market.

Recycling

Carried out through the processing and recycling of E-waste with a focus on better use of assets and the separation and purity of the components of each equipment. Thus, the possibilities for the reinsertion of electronics for the sector of origin or other markets grow.

Data Center

Date information guarantee and security Centers, even after the IT Rollout, ranging from the collection of user data to its destruction or sharing, avoiding the diversion of stored information. Guarantee of secrecy, misrepresentation, destruction of equipment and correct disposal in accordance with the current legislation.

items

Commitment and Social Responsibility.

A 100% philanthropic institution that offers biopsychosocial and educational support to children and adolescents, cancer patients, bone marrow, liver and kidney transplant recipients, together with their low-income companions, from all over Brazil.

Non-profit organization, created in 1991 with the mission of guaranteeing children and adolescents with cancer, within the most advanced scientific standards, the right to achieve every chance of cure with quality of life.

As a non-profit social organization, it was created in 1994 with the objective of acting as a space for workshops for children and young people belonging to low-income families and residents of nearby neighborhoods.

Committed to leading the corporate environment and providing safe and responsible E-Waste Management, which not only benefits our customers, but also to protect our environment, minimize landfills and preserve natural resources. Protect our natural environment for present and future generations.

A philanthropic organization that since 1994 has been available to collaborate on children's issues, welcoming children who have suffered any type of physical or psychological violence, neglect or abandonment.

Long-term articulating organization. We stayed for an average of 12 years in each community where we operate, so that they create conditions to continue on their own. We care not only about the present, but also about people's future.

ESF-Brasil is part of the Engineers Without Borders International (EWB-I) network, present in more than 65 countries, with centers in all regions of the country, working with the objective of pairing learning and social role with the performance of engineering professionals and students.

Looking after our Planet.

Commitment and Environmental responsibility

Plant Trees

Formulated with the aim of promoting the accomplishment of voluntary reforestation projects to offset greenhouse gas emissions, the Plante Arvore program aims not only to remove and store carbon from the atmosphere through restorations, but to add values that enhance quality of rural landscapes, maximizing benefits for biodiversity, water resources and soil conservation.

The program consists of the registration of rural landowners who have areas in their properties to be restored or areas of riparian forest that must be redone. In this way, there is a convergence between companies that have an interest or need to promote the planting of native trees, financing them, and registered rural owners who have a demand for restoration, who are responsible for carrying out the planting. Adhesion to the program is voluntary by both parties.

Grove

We are a civil society organization with the objective of promoting environmental education and promoting the planting of tree seedlings. Our main purpose is to encourage environmental awareness and the expansion of knowledge, always thinking about the relationship between human beings and nature in a responsible and committed way.

We operate in several states, that is, in several Brazilian biomes, especially in the Cerrado, as we are headquartered in the Federal District, a region fully occupied by this biome.

Our Projects

Environmental Education: We work to strengthen environmental education;

Forest Recovery: We direct our plantations towards forest recovery;

Restoration of Springs: Preserving springs is preserving life;

Project Incubator: We help other institutions to carry out their projects.
